

RSI 1h Edge Discovery - Phase 2B Final Findings

Corrected width-stability sweep: w10/w11/w12 x r11/r12/r13 x lb10/lb20/lb35 x rails 2.15/2.35/2.45.

Batch: ema200_rsi_1h_edge_phase2b_corrected_width_stability_fee04; candidates 81, ok 81, failed 0.

1. Executive conclusion

Phase 2B confirms w11 as the main width-ridge. w10 is useful as a broad/profit comparator but is often short-heavy. w12 is too strict for the main baseline: trade count drops and the long side often breaks.

The final practical core is w11/r12. r11 can look good, but it is often redundant because recent_width <= current_width. The meaningful recent expansion test is recent_width > current_width, especially w11/r12.

Final roles: main stability baseline = 2.15 + w11/r12/lb20; sharp core = 2.15 + w11/r12/lb10; upper semantic comparator = 2.35 + w11/r12/lb20; transition comparator = 2.45 + w11/r12/lb20.

2. Aggregates by current width

w	mean PF	median PF	mean PnL	WR	trades	PF>=1.15	both PF>1	gap
w10	1.087	1.101	2 257	55.2%	253	1	13	0.211
w11	1.171	1.175	3 433	56.6%	198	24	26	0.077
w12	1.053	1.051	654	53.9%	144	0	2	0.257

3. Aggregates by lookback

lb	mean PF	median PF	mean PnL	WR	trades	PF>=1.15	both PF>1	gap
lb10	1.102	1.091	2 003	55.3%	194	6	12	0.199
lb20	1.109	1.109	2 260	55.3%	198	10	15	0.178
lb35	1.101	1.101	2 080	55.2%	203	9	14	0.169

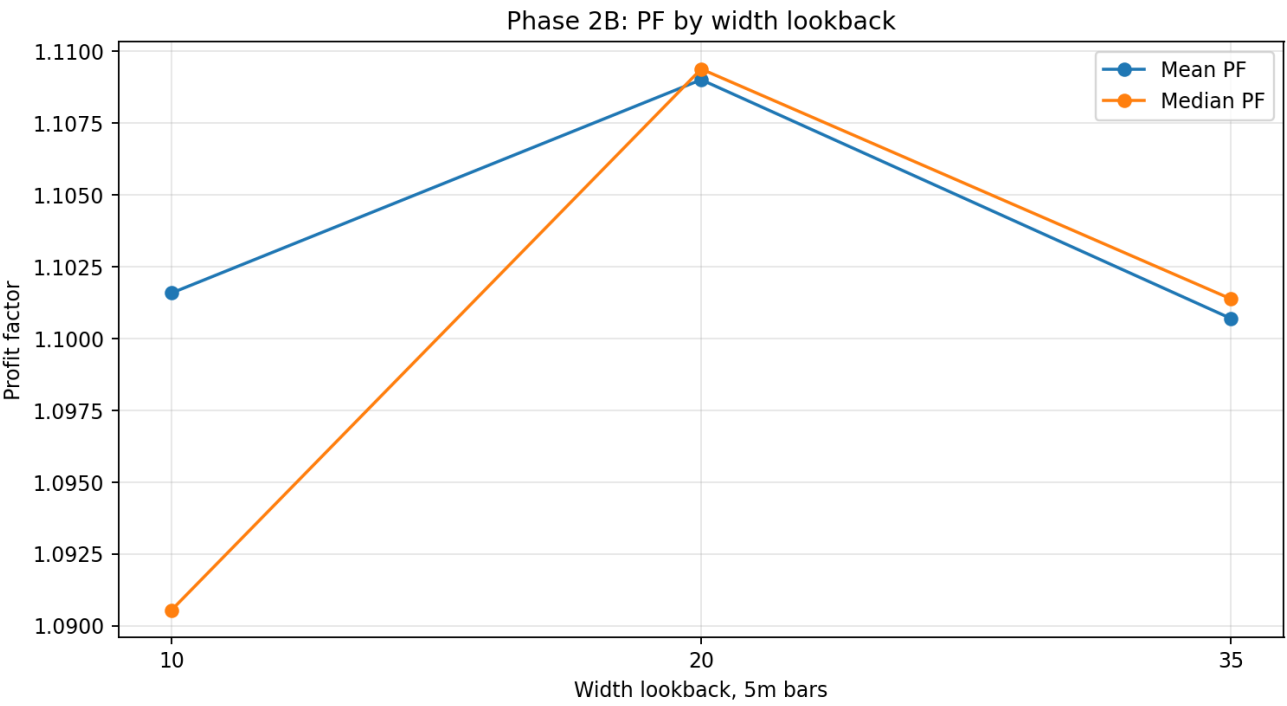

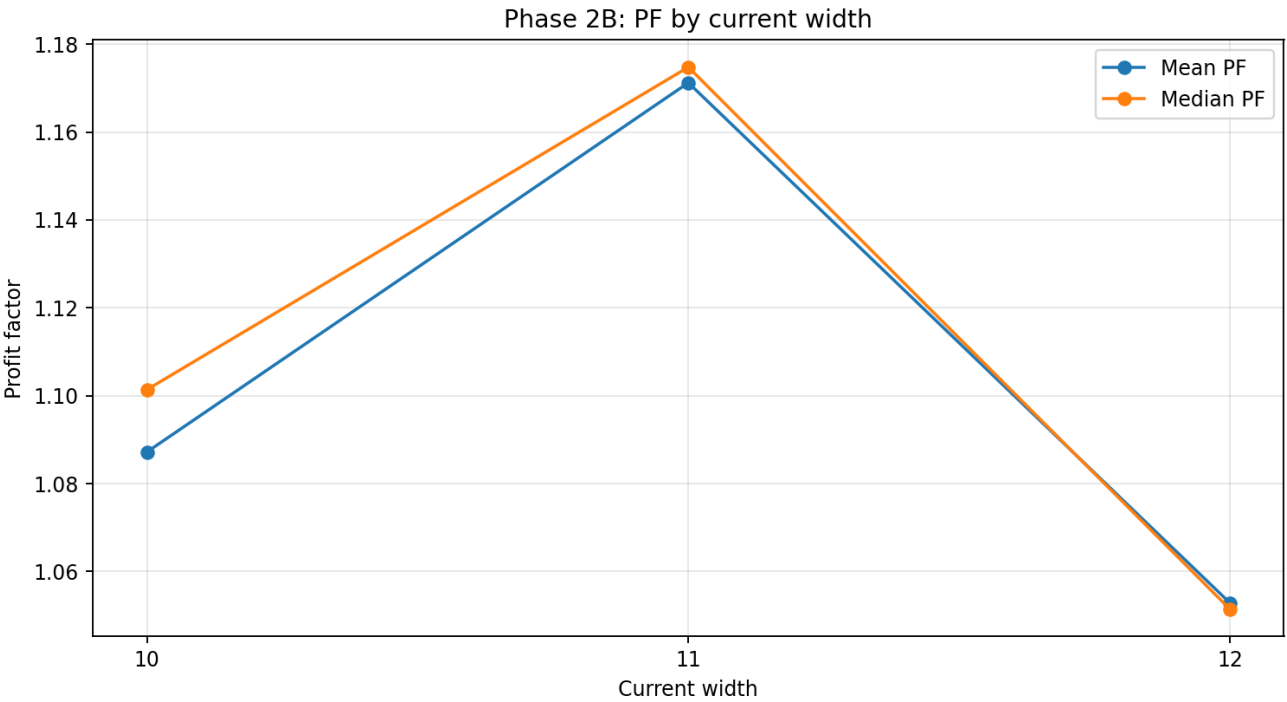

4. Selected candidates

Role	Candidate	Trades	PnL	PF	WR	DD	Long PF	Short PF	Gap
primary stability baseline	2.15 w11/r12/lb20	200	3 812	1.202	57.5%	-20.3%	1.184	1.224	0.040
sharp core best score	2.15 w11/r12/lb10	197	4 088	1.218	57.9%	-20.3%	1.214	1.222	0.008
upper semantic balanced	2.35 w11/r12/lb20	199	4 009	1.190	56.8%	-25.0%	1.191	1.189	0.001

5. Stable non-redundant shortlist

Candidate	Trades	PnL	PF	WR	DD	Long PF	Short PF	Gap	Score
2.15 w11/r12/lb10	197	4 088	1.218	57.9%	-20.3%	1.214	1.222	0.008	95.7
2.35 w11/r12/lb20	199	4 009	1.190	56.8%	-25.0%	1.191	1.189	0.001	87.4
2.15 w11/r12/lb20	200	3 812	1.202	57.5%	-20.3%	1.184	1.224	0.040	85.4
2.35 w11/r12/lb10	196	4 312	1.205	57.1%	-23.6%	1.222	1.187	0.035	83.9
2.35 w11/r12/lb35	202	3 511	1.167	56.4%	-25.0%	1.163	1.173	0.010	81.5
2.15 w11/r12/lb35	203	3 191	1.170	56.7%	-20.9%	1.153	1.189	0.036	77.9
2.15 w11/r13/lb20	193	3 192	1.179	57.0%	-20.3%	1.204	1.152	0.052	76.6
2.45 w11/r12/lb20	199	3 862	1.178	56.8%	-25.8%	1.206	1.146	0.060	74.1
2.45 w11/r12/lb35	202	3 351	1.155	56.4%	-25.8%	1.178	1.130	0.049	72.4
2.45 w11/r12/lb10	196	4 174	1.192	57.1%	-24.4%	1.238	1.145	0.093	70.6

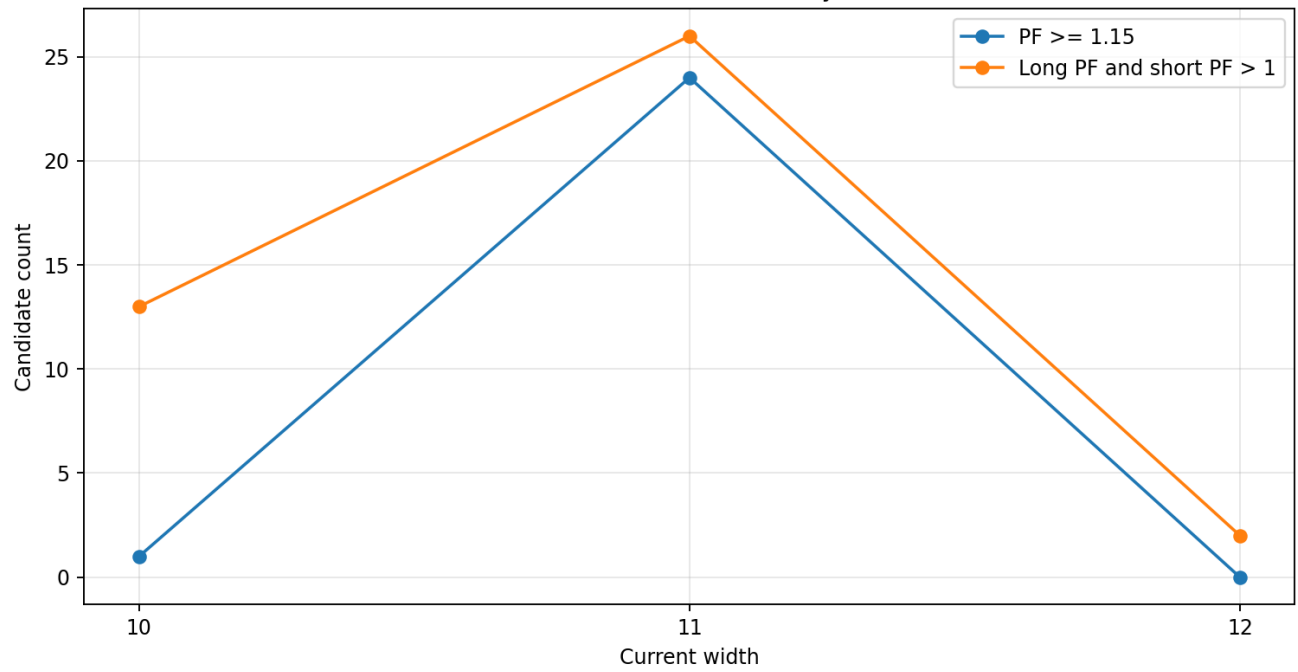

6. Charts

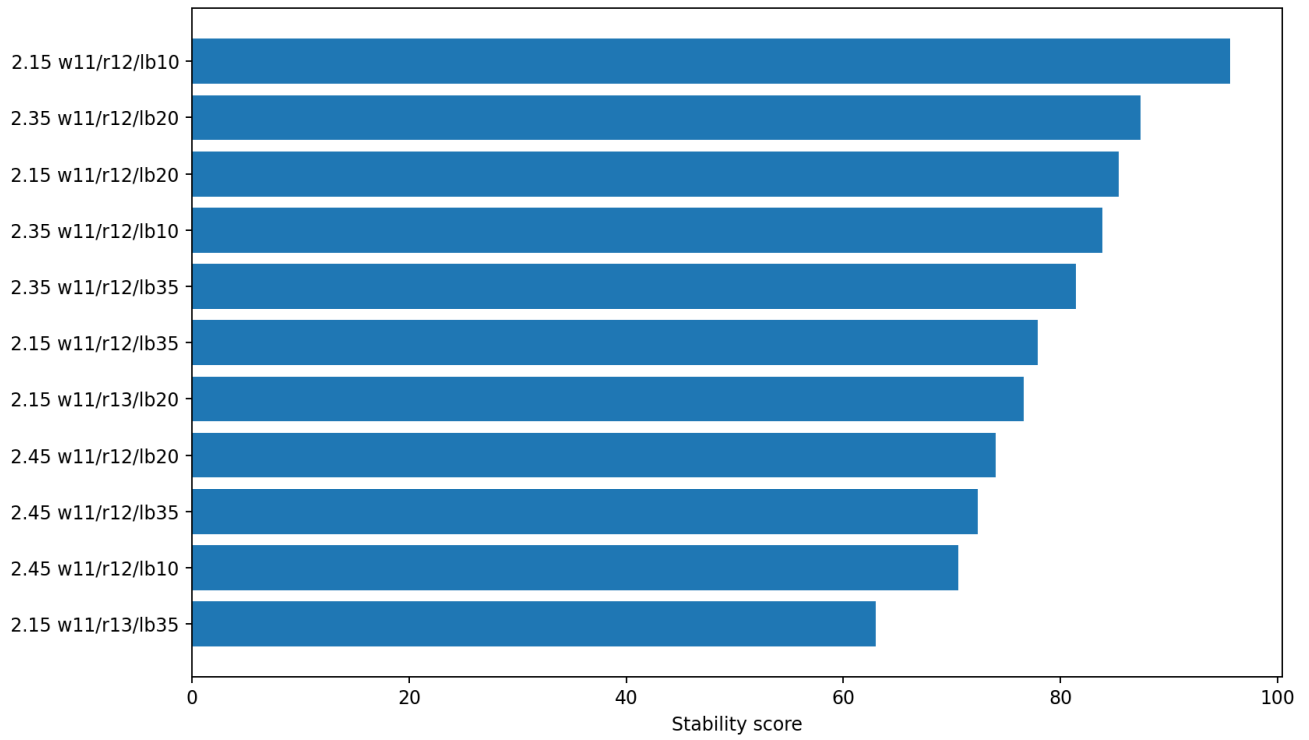

Phase 2B: win rate by width lookback

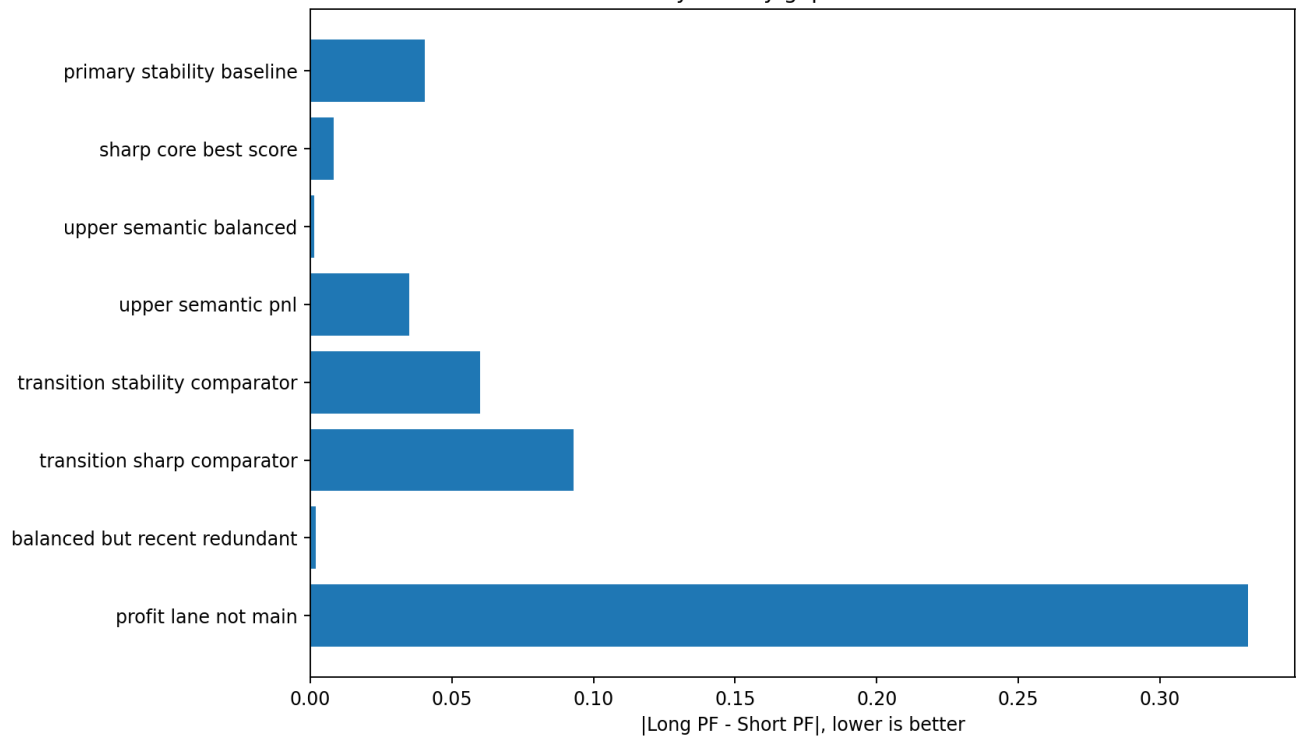

Phase 2B: robust candidate counts by current width

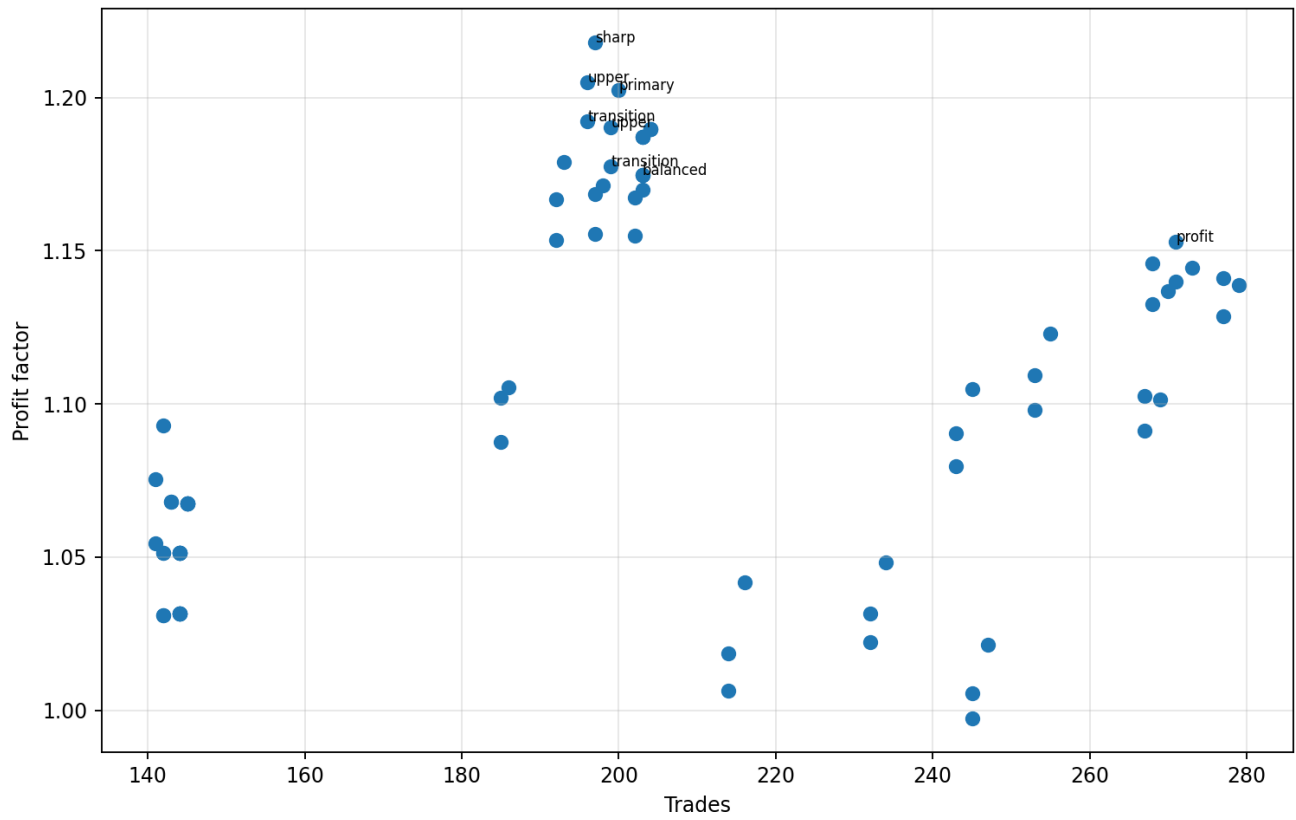

Phase 2B: stable non-redundant shortlist

Phase 2B: PF symmetry gap for selected candidates

Phase 2B: trades vs PF

7. Next phase

Width-core discovery can be closed for now. Next phase should use the selected candidates only.

Recommended next phase: RSI 1h diagnostics/blocker on a fixed small set of cores: 2.15 w11/r12/lb20, 2.15 w11/r12/lb10, 2.35 w11/r12/lb20, and 2.45 w11/r12/lb20.
